DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mulier et al. '037 further in view of Schulze et al. '970. Mulier et al. disclose a combination ablation visualization apparatus comprising an elongated body (30), first and second jaws (48 & 50), and a fluid pathway (58) terminating in a plurality of apertures (166). Mulier et al. teach all of the limitations of the claims except a dissecting member. Schulze et al. disclose a similar apparatus and teach that it is old and well known in the art to provide a dissecting member (50) that is useful for separating tissue. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide a dissecting member on the Mulier et al. apparatus as taught by Schulze et al. to provide a means of separating tissue.

Claims 7 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mulier et al. and Schulze et al. further in view of Wappler et al. '559. Mulier et al. and Schulze et al. teach all of the limitations of the claims except an endoscope and light source. Wappler et al. disclose a similar device that includes an endoscope (31) and a light source (33) that provides a means of viewing the treatment site. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention

Art Unit: 3739

was made to provide an endoscope and light source on the Mulier et al. device to provide a means of viewing the treatment site.
